Reviewer’s report

Title: Compulsive carnival song whistling following cardiac arrest: a case study

Version: 2 Date: 6 May 2012

Reviewer: Leonardo Fontenelle

Reviewer’s report:

Although I understand that difference between perseverative behavior, stereotypies and maneiristic behaviors cannot always be given, authors should at least comment on the possibility that, in this case, whistling is a mere stereotypy/verbigeration following brain insult, and not including just autism and Tourette's syndrome as additional differential diagnosis.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
