Reviewer’s report

Title: The relationship between obesity and neurocognitive function in Chinese patients with schizophrenia

Version: 2 Date: 22 February 2013

Reviewer: Isabelle ROUCH

Reviewer's report:

In the former version of the paper, the authors had not considered various factors which could be both linked to cognitive function and BMI, such as educational level, duration of the disease, medication taking, other cardiovascular risk factors...
These elements could eventually explain the observed relationship and it is important to take them into account in the analyses.
They have taken these factors into account in their new version, which was improved according to this point.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
