Reviewer's report

Title: Promoting recovery-oriented practice in mental health services: a quasi-experimental mixed-methods study

Version: 2 Date: 26 May 2013

Reviewer: Tom Trauer

Reviewer's report:

Minor essential revisions.

1. Page 17. "Where doctors where not on-board . . . " should be "Where doctors were not on-board . . . ".

2. Page 18. " . . . with a view to once patients left their care and potentially the care of the mental health services." is unclear and bad grammar. Revise.

3. Table 2. The topics (rows) should be ordered in frequency of occurrence, which is actually very similar in the Control and Intervention conditions. In fact, the four most frequent (Care plan reviews, Relapse prevention, Medication, and Physical health, are the most frequent in both groups.

4. Table 3. Table 3 should then follow the same order as Table 2.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
