Reviewer's report

Title: Internet-based interventions for eating disorders in adults: a systematic review

Version: 1 Date: 23 October 2012

Reviewer: Fernando Fernandez-Aranda

Reviewer's report:

This is a well written manuscript, dealing with an interesting topic in the ED field. Systematic reviews in different therapy approaches for ED are needed.

Regarding results, please consider including figures with effect size. Although tables are informative, the figures might be of interest at the first view.

Since there was heterogeneity in the studies used (type of program used, diagnostic criteria, samples selection criteria,..) , why not considering including a more flexible criteria for selecting eligibility rules? Otherwise, the conclusion are limited.

Summarizing, well written study, of clinical relevance, that adds new to the literature. However, after eligibility criteria used, due to reduced number studies finally considered, the conclusions might be taken with caution.
