Reviewer’s report

Title: Family environment and Attention Deficit Hyperactivity Disorder in children - mothers’ and teachers’ views

Version: 1 Date: 16 June 2013

Reviewer: Takashi Okada

Reviewer’s report:

In this article, the authors try to identify family-environmental factors associated with ADHD. Although this study is based on relatively small samples and ADHD diagnosis is based on teacher-rating, such evidence is very important and interested for many readers of BMC Psychiatry. However, this article is difficult to understand because of the following reasons;

1. This article lacks abstract.
2. The title is not specifying precisely the contents of this article
3. The “Introduction” seems a bit redundant. Authors should only focus on family-environmental factors associated with ADHD.
4. The hypothesis that authors should examine was not clearly written.

Minor points;
1. P2L10 TRF should be spell out not in P4, but on this page.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
