Reviewer’s report

Title: Emotional facial expression in women recovered from anorexia nervosa

Version: 2 Date: 27 February 2013

Reviewer: Giovanni Abbate-Daga

Reviewer’s report:

the authors followed suggestions and edited the manuscript accordingly. Now the article is ready to be published/ does not need any further change.

Discretionary Revisions

The authors could include their following opinion about future AN treatment in the article:

Cinematherapy is the process of using films in therapy as metaphors to enhance client insight and optimal growth. By involving an individual or family the task of viewing a film, it is anticipated that clients will connect their own life experiences with those demonstrated on the screen and ultimately new solutions to old problems. This could be a potential line of treatment for people with AN.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
