Reviewer's report

Title: Study protocol Efficacy of immediate patient feedback in emergency psychiatry: A randomized controlled trial in a Crisis Intervention & Brief Therapy Team

Version: 3 Date: 2 November 2013

Reviewer: Christoph Flückiger

Reviewer's report:

The authors addressed the most issues raised by the reviewers. It is a precise paper.

There is still a disagreement between the reviewer(s) and the authors that this study design is innovative enough to be published. There are various "standards" in the field if conventional state-of-the-art designs have to be published. At the end this is probably an editors' decision (in respect to the BMC requirements).

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
