Reviewer's report

Title: Psychometric behaviour of the Strengths and Difficulties Questionnaire (SDQ) in the Spanish National Health Survey 2006

Version: 3 Date: 25 February 2013

Reviewer: Carlos Garcia Forero

Reviewer's report:

I'd like to congratulate the authors about the present state of the manuscript. They've addressed my observations thoroughly and with remarkable competence. The paper has turned methodological limitations into strengths.

Just a really minor comment: it is not advisable to refer to factor loadings as "loadings". I'd recommend to change that terminology "loadings" by "factor loadings" notation in the final version of the manuscripts.

My felicitations on the methodological quality of the paper.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:
