Reviewer's report

Title: Correlation between the Personal and Social Performance scale (PSP) and the Positive and Negative Syndrome Scale (PANSS) in a Greek sample of patients with schizophrenia

Version: 5 Date: 22 April 2014

Reviewer: Georg Juckel

Reviewer's report:

Minor Essential:
This is a well written report about the relationship between PSP and PANSS in schizophrenia. The authors have investigated an impressive number of patients (>2000), thus they came to very valid statistically founded results. Interestingly, they mainly found a relationship between PSP and PANSS general psychopathology, while previous reports have found a relationship rather to negative symptoms. Therefore and due to the very high number of patients it is definitively an enrichment of the literature. The authors should only cancel the Greek version of the PSP scale, which is not necessary for international readers.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
