Reviewer's report

Title: White Matter Abnormalities in Adolescents with Generalized Anxiety Disorder: a Diffusion Tensor Imaging Study

Version: 3 Date: 22 July 2013

Reviewer: Robert J Dawe

Reviewer's report:

The authors have addressed most of the issues raised by me and the other reviewer, and as such I am in favor of publication of this manuscript.

Discretionary Revisions

One thing the authors did not do was adjust the colorscale in the figure so that the effect size (or possibly the p-value) at each red voxel could be communicated to readers, maximizing the amount of information conveyed by the figure. At this point I'm fine with the figure as it stands, but if the authors do choose to revise the figure as suggested I could promise a speedy return of the review if necessary.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I declare that I have no competing interests.
