Reviewer's report

Title: Triglycerides as a biological marker for repeat re-hospitalization resulting from deliberate self-harm in acute psychiatry patients: a prospective observational study

Version: 4 Date: 19 October 2013

Reviewer: Alfonso Troisi

Reviewer's report:

The revised paper addresses most of the points I raised in my original review and clarifies some aspects that were not understandable in the previous version. Now the manuscript is basically acceptable for publication. The only missing revision is about language: the authors continue to use "repeat" instead of "repeated" throughout the text! Who were the "experts" they mention in their reply letter?

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
