Reviewer's report

Title: A pooled analysis of injection site-related adverse events in patients with schizophrenia treated with olanzapine long-acting injection

Version: 1 Date: 25 June 2013

Reviewer: Jacob Ballon

Reviewer's report:

The authors present a retrospective pooled analysis of injection related adverse events of olanzapine pamoate. The use of LAI medications is often limited by concerns about injection site pain/adverse events.

Discretionary Revisions: 1) Please provide more information about the other medications. It would be helpful to have some understanding from the beginning of what the general range of injection-related AE's are for other medications. How many of these cited studies of other medications excluded studies in which active-solicitation was used (as was done in this report)?

2) Was the one excluded duration result considered to likely be inaccurate? What is the justification for excluding the outlier?

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
