Reviewer’s report

Title: The prevalence of psychosis in epilepsy: a systematic review and meta-analysis

Version: 1 Date: 7 November 2013

Reviewer: Peter Byrne

Reviewer’s report:

This is a very useful addition to the literature on epilepsy-psychosis. Nicely set up, clear search criteria, sound methods, well presented tables and tightly written. I thought the main limitation of the key studies in this area is that they are in specialist centres where "complicated epilepsy" is overrepresented. Suggest they include their sentence that only 10% of the included studies were population based in the Abstract.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
