Reviewer's report

Title: Toxoplasma seropositivity and depression

Version: 2  Date: 10 December 2003

Reviewer: Silke Bachmann

Reviewer's report:

General

The authors report on a case of seropositivity to Toxoplasma gondii associated with depression. The therapeutic approach confirms the relationship which was established via laboratory tests. Thus, this case report is convincing and of interest for a broader audience of psychiatrists and psychiatric researchers.

The manuscript is written in a concise and clear manner, however, it should be checked for the English language (including one typo "carbamazepin").

I recommend this case report for publication.

Discretionary Revisions (which the author can choose to ignore)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

please see above

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

What next?: Accept after minor essential revisions
