Title: Zinc sulfate as an adjunct to methylphenidate for the treatment of attention deficit hyperactivity disorder in children: A double blind and randomized trial

Version: 2 Date: 15 March 2004

Reviewer: William C Heird

Reviewer's report:

The authors of appear to have addressed all my previous comments and the manuscript is much improved. The only remaining question concerns the prevalence of zinc deficiency in Iran. To some extent, my question reflects personal curiosity but it also is important with respect to ascertaining the relevance of the finding to areas where, for example, zinc deficiency is rare.

An additional short paragraph addressing this issue would further improve the manuscript but certainly is not necessary.
