Reviewer's report

Title: Topiramate in the treatment of sexual addiction

Version: 2 Date: 22 April 2006

Reviewer: Eli Coleman

Reviewer's report:

General

This is a straightforward and interesting case study that adds to the scientific literature on the types of medications that might be found useful in the treatment of compulsive sexual behavior, especially in conjunction with other impulse control disorders.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

My only suggestion would be to keep the title to treatment of compulsive sexual behavior or consider 'impulsive/compulsive sexual behavior

What next?: Accept after discretionary revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No
