Reviewer's report

Title: Topiramate in the treatment of sexual addiction

Version: 2 Date: 25 April 2006

Reviewer: Nathan Shapira

Reviewer's report:

General

This is an interesting case report which highlights potential mechanisms of cue reactivity and a potential treatment for nonparaphilic sexual addiction.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

I believe that the reference 11 is an error as it does not relate to topiramate.

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No

Declaration of competing interests:

I have previously served as a speaker for and received grant funding from Ortho-McNeil. I have current patent applications which include topiramate but not in the areas covered in this case report.
