Reviewer's report

Title: The Effect of Verbalization Strategy on Wisconsin Card Sorting Test Performance in Schizophrenic Patients Receiving Classical or Atypical Antipsychotics

Version: 2 Date: 16 November 2005

Reviewer: Janusz K Rybakowski

Reviewer's report:

General

------------------------------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)
In their revised version and accompanying letter, authors responded fairly satisfactorily to most reviewer's comments.

------------------------------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)
I am still not happy with tables, especially table 2 which is barely legible. Although the authors accepted the idea of reducing digits in decimal places for the results presented in tables they did not do it. My suggestion is presenting the results of categories achieved and unique errors with digits with one decimal place and perseverative and total errors without decimal places. This could definitely make the tables more clear and legible.

------------------------------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests
