Reviewer's report

Title: The Four-Dimensional Symptom Questionnaire (4DSQ). A validation study of a multidimensional self-report questionnaire to assess distress, depression, anxiety and somatization.

Version: 1 Date: 19 June 2006
Reviewer: Matthias J Müller

General
In my opinion, the authors have done a very good job of revising their manuscript. The paper is now more focussed and more concise in its conclusions. Although the authors did not follow all of this reviewer's remarks, their revision is convincing. Thus, I agree with the present version.

What next?: Accept without revision

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
