Reviewer’s report

Title: Five-factor model personality traits in opioid dependence

Version: 3 Date: 29 June 2007

Reviewer: Antonio Terracciano

Reviewer’s report:

General
I have read the revised manuscript and authors’ response. My original comments/questions have been answered.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)
I have discretionary revisions to suggest:
1. The effect size $d = 0.51$ for Openness to Values in Table 2, so the sentence in p.5 “There were no medium or large effect sizes for any of the differences in Openness to Experience facets” should be corrected.
2. Fix “…in of one the US samples” on p.6

What next?: Accept after discretionary revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
