Title: Greater Incidence of Depression with Zolpidem, Zaleplon, Eszopiclone, and Ramelteon than with Placebo

Version: 5 Date: 15 June 2007

Reviewer: Rafael Pelayo

Reviewer's report:
I appreciate the extra work done by Dr. Kripke. The manuscript has been improved. I suspect that the results of a proper larger trial as the author suggest would not agree with his conclusions, but that is clearly my bias. I am OK with the paper as is being published. It may be controversial and perhaps merit an editorial. However, in the end the author is correct that the ideal study has not been done.
