Reviewer's report

Title: Psychosis candidate genes in the prefrontal cortex: Meta-analysis of gene expression microarray studies

Version: 2 Date: 4 October 2008

Reviewer: Paul Pavlidis

Reviewer's report:

The authors have addressed my concerns, except for the following point.

While an improvement over the original submission, the description of the DF correction on page 7 is still not clear and I don't think what was done can be reconstructed from the description. This must be described more clearly so it can be reproduced by other groups. For example, what does "calculated using various values" mean?

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
