Reviewer's report

Title: Post-conflict mental health needs: A cross-sectional survey of trauma, depression and associated factors in Juba, Southern Sudan.

Version: 2 Date: 27 January 2009

Reviewer: Unni Krishnan Karunakara

Reviewer's report:

The authors have adequately responded to questions I raised in my earlier review of the paper.

To revisit a point I raised earlier, the authors should make clear that the EPI method that they refer to in the methods section is the EPI random walk method rather than the more widely known EPI cluster survey method.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:

I declare that I have no competing interests.
