Reviewer's report

Title: Leveling off of prevalence of obesity in the adult population of Sweden between 2000/01 and 2004/05

Version: 1 Date: 19 January 2010

Reviewer: Roya Kelishadi

Reviewer's report:

-The objective stated in the abstract is vague, it shall be revised according to the objectives provided in page4.
-By considering the rapid rise in the prevalence of obesity worldwide, the rationale of selecting these two relatively old studies shall be justified. Was that only because of availability of these data?
-The methods, especially the sampling framework needs to be described in more details.
-The interpretation of the current findings with existing literature shall be more strong.
-The study limitations are not well described.
-The conclusion does not directly refer to the study objectives and findings.
-Some abbreviations are not necessary.
-The figures are not necessary.
-The English writing needs to be improved.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
