Reviewer’s report

Title: Assessing the accessibility of HIV care packages among tuberculosis patients in the North-West Region, Cameroon.

Version: 4 Date: 8 February 2010

Reviewer: Jeremiah Chakaya

Reviewer’s report:

This is a greatly improved manuscript
The research question is now clearly articulated
The methodology used to answer the research question (abstraction of data from TB and ART registers) is well described and appropriate for the research question.
I have no comments on the statistics used but I note that this section too has been revised.
The language errors of this manuscript have been revised.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:
I declare that I have no competing interests
