Reviewer's report

Title: Breast and Cervical Cancer Screening Among Women in Metropolitan Areas of the United States by Commuting Time to Work and Use of Public Transportation, 2004-2006

Version: 2 Date: 6 November 2009

Reviewer: Min Lian

Reviewer's report:

The responses and revisions from authors are fine. Just one more comment: Current analyses are ok. But it could be better to apply multilevel analysis since the study factors are county-level. Multilevel modeling does not mean the analyses are unweighted. The complex sampling weighting for BRFSS survey data can be taken into account in multilevel modeling although it is more advanced and complex. Authors may be able to try multilevel modeling to see if there are some different findings.
