Reviewer's report

Title: Pattern of fractures across pediatric age groups: Analysis of individual and lifestyle factors

Version: 2 Date: 10 October 2010

Reviewer: Georg Singer

Reviewer's report:

A much improved manuscript now.
I have a few more comments:
1) There is no information in the abstract that the study included patients from a 6 months period.
2) Second to last sentence in the results section of the abstract: Confusing, i would think that 23% of the patients sustained more than one fracture at the same time. Please rephrase.
3) Third sentence, first Paragraph of the results section: I think it were 76 pre school children (at least the table shows this and otherwise the total number of patients would be 383). Please check on that.
4) Page 8: There is no Figure 3. I think that the authors refer to Figure 1.
5) Page 14: These findings are not surprising and reflect (not reflects) the amount of time spent (not spend)..... and "No one was suspected to be victim (not victims). Please change.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
