Reviewer's report

Title: Do consumers’ preferences for improved provision of malaria treatment services differ by their socio-economic status and geographic location? A study in southeast Nigeria

Version: 1 Date: 9 June 2009

Reviewer: K Asamoa

Reviewer's report:

- The question posed by the researchers is well defined
- The methodology is appropriate. However, the study could have benefitted with addition of some qualitative methods
- The data is okay but does not tell if differences are statistically significant
- The manuscript adheres to the standards for reporting and data deposition
- Discussion and conclusions are based on the data. Could be stronger with qualitative methods
- Limitations of work is not stated
- The authors clearly explained the motivation for this study which is to explore reaching the Abuja targets set in 2000
- The title and abstract cover what has been found
- The writing is acceptable
