Reviewer's report

Title: Effectiveness of intensive group and individual interventions for smoking cessation in primary health care settings. A randomized trial.

Version: 7  Date: 8 February 2010

Reviewer: Esteve Fernandez

Reviewer's report:

The authors have done their best to address all the comments raised by the reviewers. Reviewer 1 is right that losses to follow up are of concern for the validity of the study. However, this limitation is clearly discussed by the authors and hence the readers may form their own judgement about the potential selection bias operating in the study. Although this is a serious limitations, the authors have no option to increase the sample size and, moreover, the study has other original points that merit consideration.

In my opinion the paper can now be accepted for publication.
