Reviewer's report

Title: Utilization of antenatal HIV testing: Evidence from a community-based study in Northern Vietnam

Version: 2 Date: 8 October 2010

Reviewer: Kazuhiro kakimoto

Reviewer's report:

Major compulsory revisions
The title should be changed to clearly show the topics or what the authors are trying to insist in the paper.

Minor essential revisions
1. "(Table 2)" and "(Table 3)", which show the results, in "Methods" should be removed.
2. There should be a table as “Table 1”, whose information includes the current “Table 1”, to describe socio-economic characteristics.

Discretionary revisions
There could be a multivariate regression analysis to clear confounding factors, which would make the paper more informative.
