Reviewer's report

Title: Physical activity behaviours of Culturally and Linguistically Diverse (CALD) women living in Australia: A qualitative study of sociocultural influences

Version: 1 Date: 23 October 2010

Reviewer: Jyotsna M Kalavar

Reviewer's report:

I believe this article is timely, meaningful, and seeks to address an important topic among immigrant populations.

Essential revisions:
1) Cite age range of participants
2) More on recruitment and community partners. Important for others who wish to replicate to have a better understanding of the process
3) Typos on pae 6 (characteristics; initially)
4) Discussion - Erosion over time evidence for 'Healthy Immigrant Effect' not seen in this study. Seems to suggest longitudinal data collection which was not the case.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

My response is 'no' to all of the above. I declare that I have no competing interests.
