Reviewer's report

Title: HIV Epidemic in Far-Western Nepal: Effect of Seasonal Labor Migration to India

Version: 1 Date: 23 January 2011

Reviewer: Fred Brauer

Reviewer's report:

Discretionary revisions
I would suggest that total population sizes should be rounded off to perhaps the nearest 10,000, or even 100,000, since the data do not really support estimates to the nearest individual.

The paper describes an approach that is more generally applicable than the specific situation investigated here, and some remarks in the conclusions on how the approach may be used in other situations would be welcome.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
