Reviewer's report

Title: Health Related Quality of Life among Iraqi Immigrants Settled in Malaysia

Version: 2 Date: 27 August 2010

Reviewer: Ursula Voss

Reviewer's report:

Introduction:
the first page or so is, in my view, obsolete. What is missing is a coverage of the existing literature on quality of life and migration.
introduce the QOL abbreviation.

Method:
You recruited 300 migrants from Iraq. What about a control group of Malaysians? I am not familiar with the "domain score" that you refer to but I would think that, in order to compare quality of life between two groups, both groups would have had to participate in the study.

Results:
report t-values
specify the domain score

Discussion:
Results have to be compared with the existing literature and discussed with regard to other findings.

Level of interest: An article of importance in its field

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
