Reviewer's report

Title: Recommendations to improve physical activity among teenagers - A qualitative study with ethnic minority and European teenagers

Version: 2 Date: 5 March 2011

Reviewer: Sara Michaliszyn

Reviewer's report:

This study examines the views and opinions of adolescents residing in South Wales in respect to their perception of exercise. I believe this is a very interesting paper that supports the theory that female children and adolescents should be a focal point of improving physical activity among youth. The authors addressed the pre-reviewer's comments and concerns and have addressed the research question well. The methodology is appropriate to answer author's research question and the data is just.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
