Reviewer's report

Title: Barriers to antiretroviral therapy adherence in rural Mozambique

Version: 2 Date: 7 August 2011

Reviewer: Chris Duncombe

Reviewer's report:

I have reviewed the revised manuscript which has addressed my main comment; that the views of health care workers were not adequately discussed. I understand the comments from the authors that they did not intend to make comparisons between HCW and community voices. They have added text which addresses my comments.

Language edits which I suggested have been addressed.
Reviewer two had significant comments about the methodology and the clarity of the writing which, to my mind, the authors have addressed.
I do not have further comments and accept the new version without revision.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
