Reviewer's report

Title: Educational difference in the prevalence of osteoporosis in postmenopausal women: a descriptive study in northern Iran

Version: 2 Date: 1 September 2011

Reviewer: Sharon Brennan

Reviewer's report:

Major compulsory revisions:
nil

Minor essential revisions:
P values are missing from table 1
Some grammatical issues remain. For instance: change "...among Iranian population, in all age groups, peak bone mass is lower than European or American population" to "...is lower than in European or American populations".
Change "Education is one of most commonly used measure of socioeconomic status (SES) in epidemiological studies" to "...is one of the more commonly used measures..."
Change "These data implicate that osteoporotic fracture risk may be higher in post-menopausal women from lower social class in this community. So women from low social level should be carefully evaluated for signs of osteoporosis during routine physical examinations." to "...from lower social classes in this community. Therefore, women from lower social classes...".

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
