Reviewer's report

Title: High prevalence of hyperglycaemia and the impact of high household income in transforming Rural China

Version: 2 Date: 30 August 2011

Reviewer: Barbara Schumann

Reviewer's report:

Peer Review of the revised manuscript of Fu et al.

Minor essential revision:
The authors have revised their manuscript thoroughly, taking my former comments into account. I have a few minor comments:

a) Discussion, 2nd last paragraph:
"Lack of statistical power might be reason for these observations..." is maybe a bit misleading (could imply either that low numbers and chance caused contradicting results, or caused statistical non-significance).

b) Table 2 - test of significance for gender difference of hyperglycemia: Does that refer to DM, IFG, or both?

c) There are still some language mistakes, mainly in the revised parts (e.g. in same paragraph as a): "Subjects with low household income was associated with...").

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
I declare that I have no competing interests.
