Reviewer’s report

Title: Association between infection early in life and the risk of mental disorders among youth in the community: a cross-sectional study

Version: 2 Date: 15 August 2011

Reviewer: Helinä Hakko

Reviewer’s report:

The author has successfully mad all corrections/modifications suggested by the reviewers. It is very important that the author has highlighted the results should be considered preliminary, because the number of cases is very small. One add which is worth of doing is to add a footnote to Table 1 expressing that the odds ratios are unadjusted.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
