Reviewer's report

Title: Global Asthma Prevalence in Adults: Findings from the Cross-Sectional World Health Survey

Version: 1 Date: 18 February 2012

Reviewer: Pedro Giavina-Bianchi

Reviewer's report:

I'd like to congratulate the authors for their study that has great relevance. The study showed that asthma continues to have high prevalence and sometimes it is not being treated properly. The results shown here emphasize the importance of the orientation of patients in relation to smoking cessation. Future studies that address the causes of different asthma prevalence in different countries will be innovative.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
