Reviewer's report

**Title:** Asthma Prevalence among 16- to 18-year-old Adolescents in Saudi Arabia Using the ISAAC Questionnaire

**Version:** 2  **Date:** 10 November 2011

**Reviewer:** ISABELLE VACHIER

**Reviewer's report:**

The major point regarding this study is that no written inform consent has been signed by the subject included.

Moreover the oral information was given by medical students meaning that no PI was in charge of the subject's recruitment and information.

In order to have an idea of the real functional status of the subjects, it would have been interested to measure lung function when subject filled the ISAAC questionnaire.

It is strongly recommended that the entire manuscript be critically assessed for style, grammar and usage.

**Level of interest:** An article of insufficient interest to warrant publication in a scientific/medical journal

**Quality of written English:** Not suitable for publication unless extensively edited

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
