Reviewer's report

Title: Program level implementation of malaria rapid diagnostic tests (RDTs) use: Outcomes and cost of training health workers at lower level health care facilities in Uganda

Version: 6 Date: 22 March 2012

Reviewer: Irene Misuka Masanja

Reviewer's report:

The authors have answered all comments from my previous review.
- I noticed that, they added one more author but his/her affiliation (No.7) was not mentioned
- In the last paragraph of results section- second sentence; if possible, it will be good to give a count of what they referred to as 'Majority' and give a bit more elaboration of what they implies by ...'there was a feeling...'

Thank you.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

One of the national facilitator (for training health workers) for malaria RDT roll-out in Tanzania.
