Reviewer's report

**Title:** Program level implementation of malaria rapid diagnostic tests (RDTs) use: Outcomes and cost of training health workers at lower level health care facilities in Uganda

**Version:** 6  **Date:** 17 March 2012

**Reviewer:** Hugh Reyburn

**Reviewer's report:**

I think the authors have addressed the questions raised by reviewers, albeit at the expense of reporting the effect of RDT training on prescribing. However I feel the paper merits publication as it addresses a very current public health issue.

I noticed some inconstency in the use of decimals, I suggest none for % and a maximum of 2 for stats test.

I think Hawthorne should have a capital

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
