Reviewer's report

Title: Colorectal cancer screening knowledge, attitudes and behavioural intention in Indigenous Western Australians

Version: 2 Date: 7 March 2012

Reviewer: John Condon

Reviewer's report:

The authors have advised that they are still trying to obtain the assistance of a statistician to deal with the statistical issues that I raised in my review; these issues are important and need to be dealt with before the manuscript is suitable for publication.

The authors have revised the manuscript to adequately address all other issues, or provided adequate explanation of why they could not modify the manuscript. I recommend that the authors be invited to address the statistical issues, with a view to publication if they can be adequately resolved.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:

I am a collaborator with author Thompson in a research funding application, which was submitted several months after my original review of this manuscript.
