Reviewer's report

Title: Colorectal cancer screening knowledge, attitudes and behavioural intention in Indigenous Western Australians

Version: 3 Date: 24 May 2012

Reviewer: Sarah Damery

Reviewer's report:

I am satisfied that the outstanding statistical issues in the manuscript have now been addressed. The additional detail in the methods section about how study analyses were performed is welcome, and the extra analyses of covariates to look for instability across variables which was suggested by the statistical reviewer seem to have been undertaken successfully. The result is not perfect, in that Tables 5 and 6 are now fairly difficult to interpret due to the footnotes and caveats associated with them, but the analyses seem more robust and thus the reader can have greater confidence that the conclusions drawn from the study in the manuscript are sound.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:
