Reviewer's report

Title: Medication Coaching Program for Stroke Patients: A Pilot Study

Version: 2 Date: 30 May 2012

Reviewer: Michael Jelinek

Reviewer's report:

The topic which you are addressing is important. The paper which you have here is really an introduction to a controlled trial, preferably randomized, which could test your worthwhile concept against usual care. I am sure that an appropriately powered study would allow you to amplify the potential of telephone coaching to improve attendance at PCP, to reduce post stroke depression and improve QOL.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
