Reviewer's report

Title: Acceptability of condom promotion and distribution among 10-19 year-old adolescents in Mpwapwa and Mbeya rural districts, Tanzania

Version: 2 Date: 18 June 2012

Reviewer: Adamson Sinjani Muula

Reviewer's report:

My comments are as below:
1. The authors refer to 5% significance level. Is the significance level not 95% by alpha of 5% or 0.05?
2. The authors refer to multi-sexual partnerships. Would it be acceptable if they use "multiple and concurrent partnerships"?
3. The authors refer to prevalence rate. But prevalence is, strictly speaking, not a rate;
4. In the methods the authors refer to that consent for children under the age of 18 years was obtained from parents. I assume the authors was not to refer to "assent" and not consent?
5. The author refer to 37% (in the Discussion) as a small proportion. Is 37% a small proportion? This may be debatable

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
