Reviewer’s report

Title: Exposures to war-related traumatic events and post-traumatic stress disorder symptoms among displaced Darfuri female university students: An exploratory study

Version: 3 Date: 21 May 2012

Reviewer: Ulrike Ehlert

Reviewer’s report:

The authors did a real good job on improving the manuscript.

There remains only one critical point. I can not agree on the phrase "prevalence" in the light of the data the authors have assessed. Prevalence means that the total group of interest its examined. In light of the Darfuri students the authors could use the phrase only, if they would have assessed PTSD symptoms in all Darfuri females studying at Ahfad University for Women. Otherwise the authors should abstain from the expression "prevalence" and better use the expression "symptom rate".

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
