Reviewer's report

Title: Availability of exercise facilities and physical activity in 2,037 adults: cross-sectional results from the Swedish Neighborhood and Physical Activity (SNAP) study

Version: 2 Date: 22 May 2012

Reviewer: Tim J Bungum

Reviewer's report:

Minor essential revisions:
Your findings were that people who lived near those places with >4 places to be physically active were more active than those with fewer places. That is fine, but I think that you should also comment on how similar physical activity behavior was for those who had 0 or 1-3 places to be active. Why would it take >4 places to make a difference over 0 places to be active? You have touched on this but it could use a bit more of an explanation.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
