Reviewer's report

Title: Availability of exercise facilities and physical activity in 2,037 adults: cross-sectional results from the Swedish Neighborhood and Physical Activity (SNAP) study

Version: 2 Date: 19 May 2012

Reviewer: Mitch J Duncan

Reviewer's report:

The authors have addressed the majority of the comments well including undertaking re-analysis of the data. It may be useful if the authors were to specifically outline that whilst not possible in the current study, analyses matching MVPA performed in neighbourhood areas and the presence of neighbourhood PA facilities may further clarify associations between MVPA and presence of PA facilities.

Minor comment

Page 10 sociodemographics – please clarify the age cut points used to separate the following two age groups 41-50 years and 50-66 years.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
