Reviewer’s report

Title: Health-Related Quality of Life in diabetic people with different vascular risk

Version: 1 Date: 6 July 2012

Reviewer: fernando antonanzas

Reviewer’s report:

It is an interesting work based on several models to find out the change in quality of life of diabetic patients. The design of the models and the database used to populate them seem adequate.

My single comment is that authors could check the variable time since diagnosis (if available) as another explanatory variable to avoid the confounding effects that cardiovascular risk may introduce in the estimates.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
